

Alzheimer Disease

Conflict of Interest Disclosure

- Consultant for: Western RHA, Norman RHA, Winnipeg RHA
- Speaker for: Pfizer, Alzheimer Society of MB, WRHA
- Received grant/research support from: no one
- Received honoraria from: Pfizer, NOW CMHA

Objectives

- 1. The attendees will be able to describe the ways that dementia is more than memory impairment.
- 2. The attendee will be able to describe the importance of early diagnosis and their roles and responsibilities in medicolegal issues such as Powers of Attorney and Driver Vehicle Licensing.
- 3. The attendees will be able to understand when to start a cognitive enhancer and how to monitor it's use.

President 1981 – 1989
Diagnosed 1994

I have recently been told that I am one of the millions of Americans who will be afflicted with Alzheimer's.

At the moment I feel just fine. I intend to live the remainder of the years God gives me on this earth doing the things I have always done. I will continue to share life's journey with my beloved Nancy and my family. I plan to enjoy the great outdoors and stay in touch with my friends and supporters.

Unfortunately, as Alzheimer's disease progresses, the family often bears a heavy burden. I only wish there was some way I could spare Nancy from this painful experience. When the time comes, I am confident that with your help she will face it with faith and courage.

Born 1911- Died 2004

a

b

Normal 3 or less

Trails B

Age	Time in seconds
18-24	49
25-34	51
35-44	58
45-54	64
85-89	141

100 metres

Usain Bolt 23yo	9.58 (200m 19.19s)
70-74	14.4
90-94	18.08
95-99	22.04

$$9.58/22.04 = 0.43$$

$$49/141 = 0.35$$

- Heterogeneity increases with age (eg Trails B SD at age 24 is 13 and at age 84 is 65)

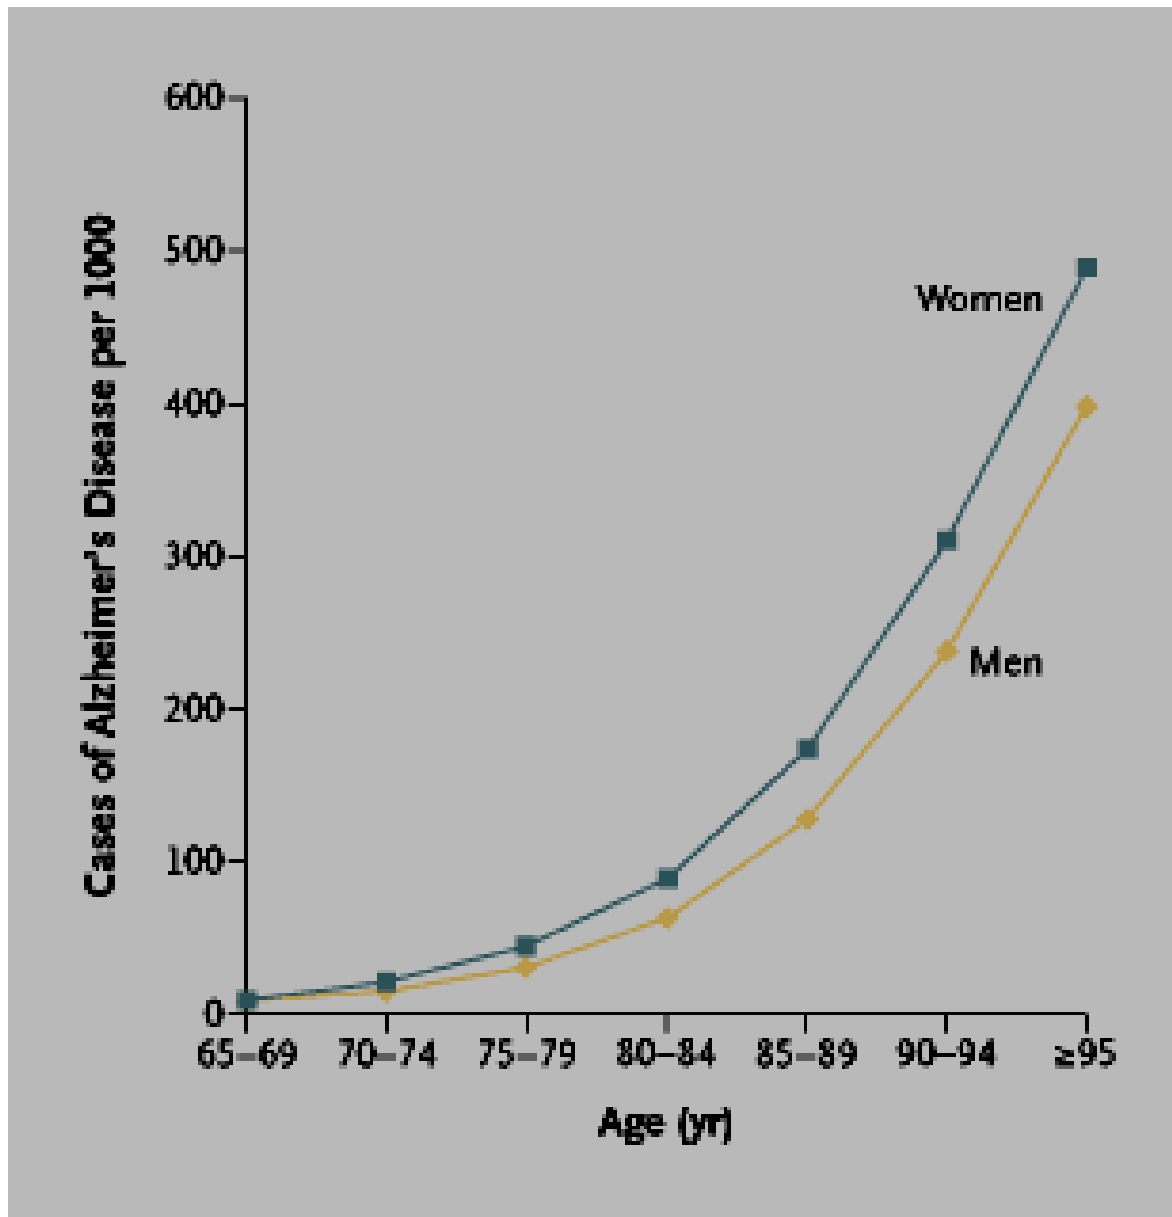

Dementia

- Most feared disease of seniors and families.
- “Old” is defined not by age but by decreased function/dependence on others (usually driven by dementia)
- Cost estimates to the system are \$5.5 billion per year now in Canada (\$140 billion US)
- “Stresses” health care “pseudo-system” collaboration/integration at all seams

The Rising Tide

- Alzheimer Society of Canada – Jan. 2010
- Incidence 103,728 new cases per year in 2008 (257,811 by 2038)
- Prevalance of 480,618 people in 2008 (1,125,184 people by 2038)
- Delay onset by 2 years would decrease the prevalence by over 400,000 people by 2038

Dementia is an Age associated illness

Dementia

- Prevalence doubles for every increase of age of 5 years after age 65
- Prevalence of 1% at age 65
- 10% of those over age 65
- 25% of those age 85

- Depends upon definition and cut points

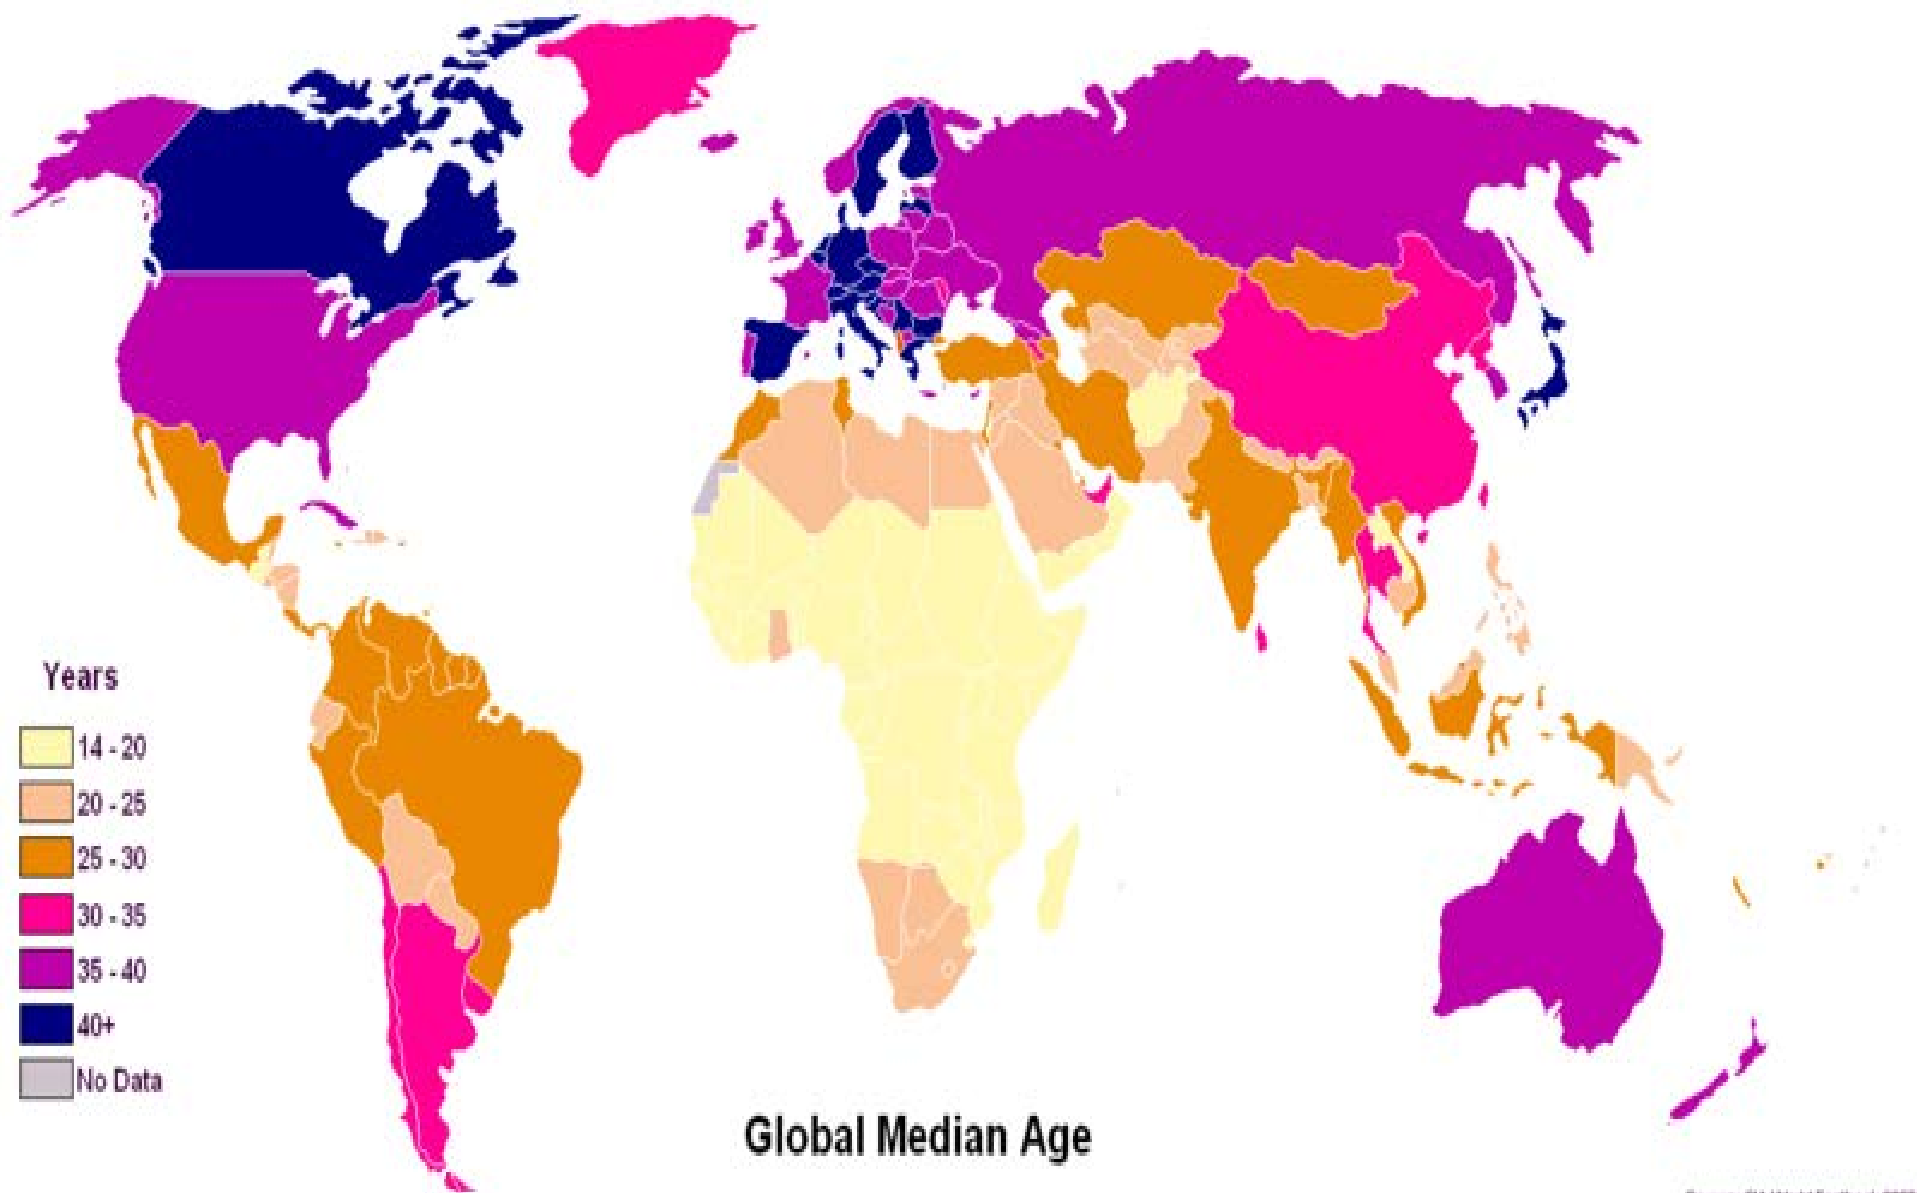

Lancet Vol 374

Demographics (2006 Census)

- Manitoba $161,890/1,148,400 = 0.141$
- Canada $4,335,250/31,612,895 = 0.137$
- Winnipeg $95,930/694,670 = 0.138$

The new 65 is 87

Alois Alzheimer 1864-1915

German neuropathologist & psychiatrist who described in 1906 the clinical and neuropathological features of a woman aged 51 years, with atrophied cerebral cortex, senile plaques and neurofibrillary tangles

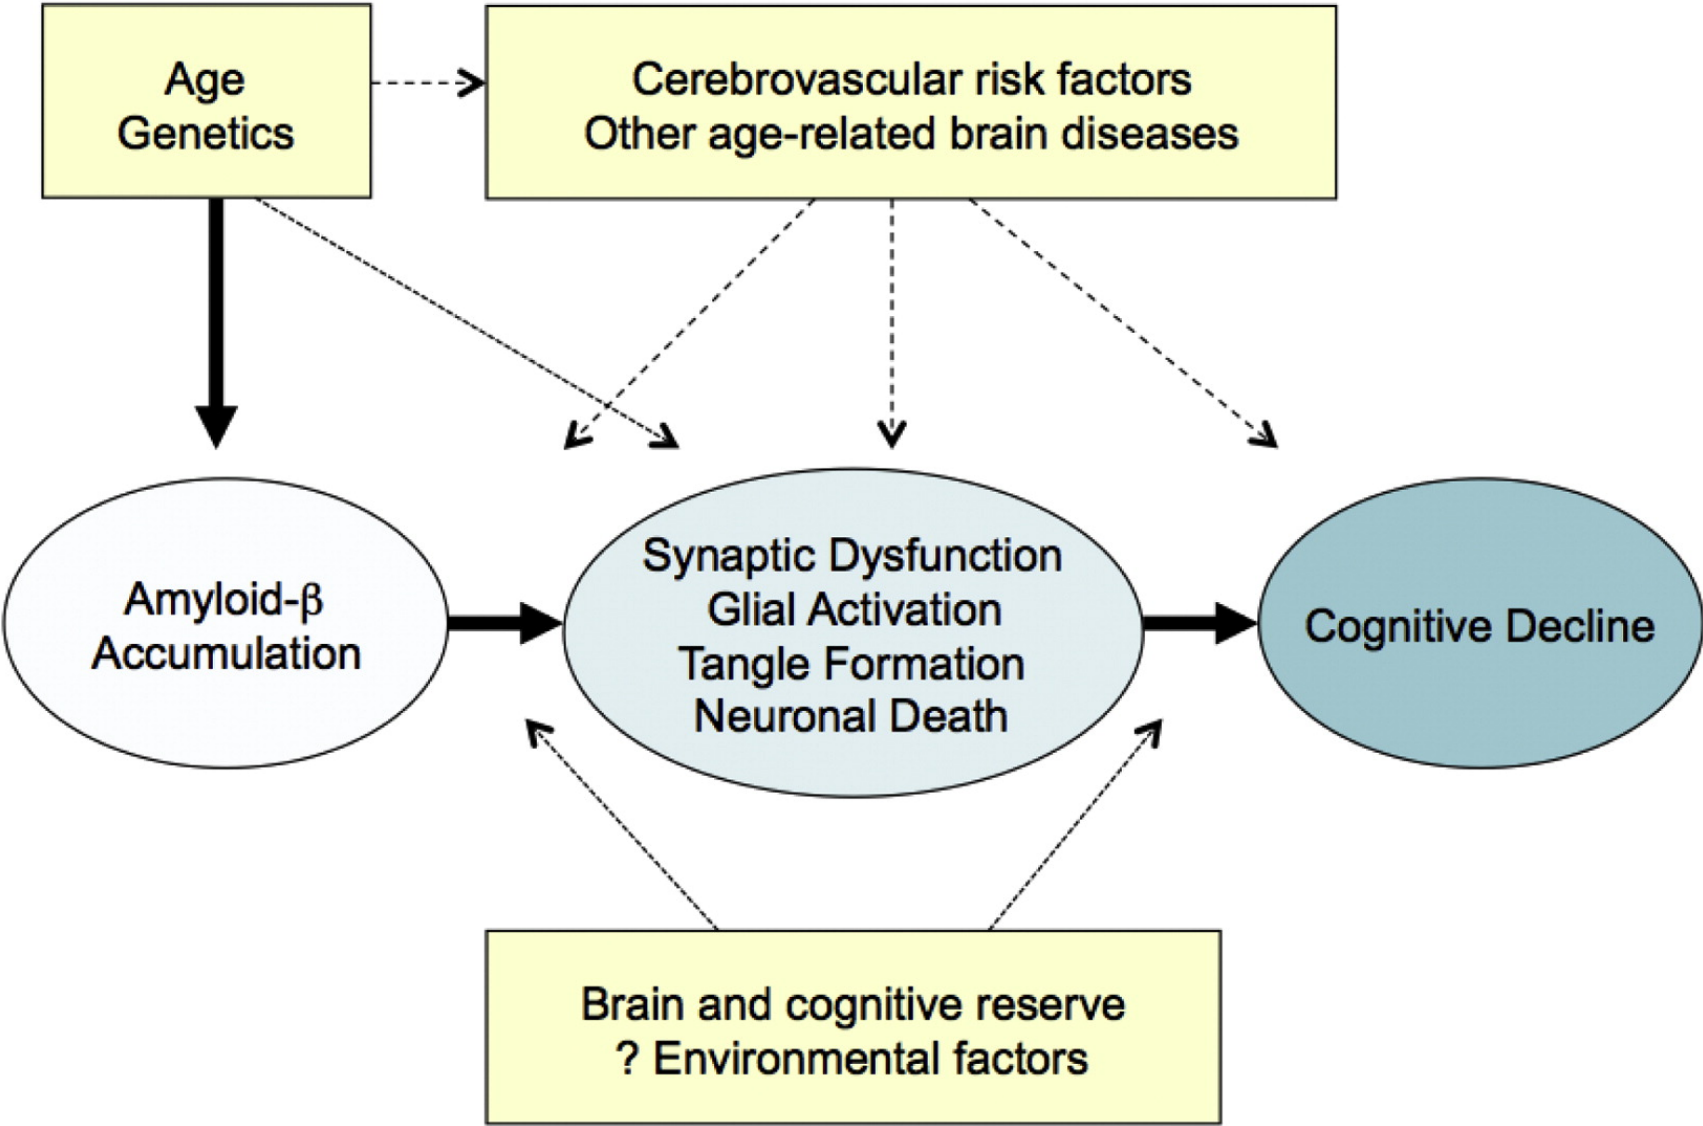

What is Alzheimer's Disease

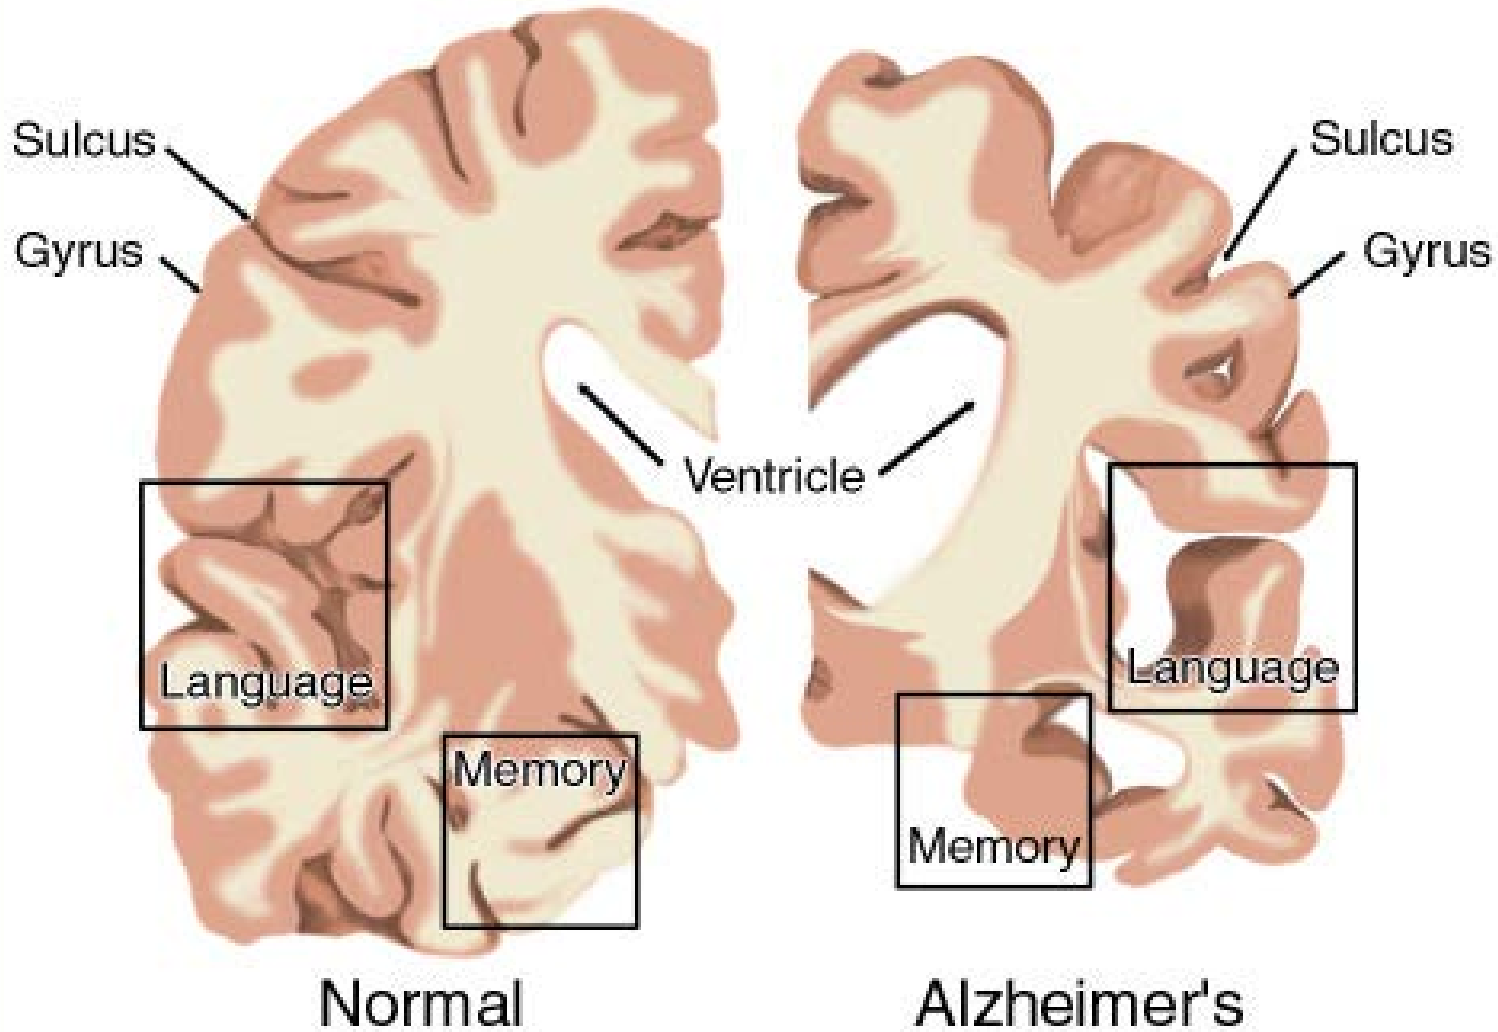

- NINCDS- ADRDA criteria
- Gradual onset
- Progressive impairment
- Memory AND word finding problems and difficulty strategizing/planning
- Easiest to diagnose when otherwise completely healthy

Hypothetical model of AD pathophysiological cascade

Brain Cross-Sections

Defining Dementia

- A decline from a previous level of function
- Demonstrable impairment of memory (DSM-3)
- Other impairment in at least one of:
 - Language (naming)
 - Judgment / frontal lobe function
 - Construction / visuo-spatial function
 - Abstraction
 - Personality
- Impairment is sufficient to interfere with function and Activities of Daily Living.
- Insidious, and > 6 months (ICD-10)

What are the types of Dementia

- AD
- FTD
- VaD
- LBD
- Parkinson's Dementia
- others

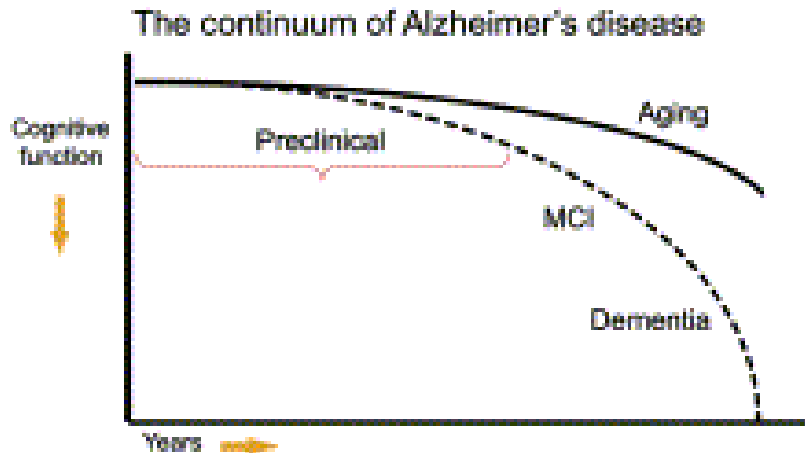

But sometimes it is more than one thing...

80% of all Dementias

Continuum

- Gradation even within pre-clinical stage
- Normal, to “not normal but not MCI”, to MCI

New Criteria:

- Reflect better understanding of other less common types of Dementia such as Lewy Body Dementia, Fronto-temporal dementia and Vascular dementia
- More research focused (pre-clinical, histopathological correlates)

The Doubling Rule (Think 2) For Dementia Risk

< 65	1%	• Risk <u>Doubles</u> every 5 years.
65	2%	
70	4%	• But each additional risk factor approximately <u>doubles</u> the risk
75	8%	
80	16%	■ +ve family history doubles the risk.
85	32%	

Dementia Risk Calculator

AGE	%
<65	1
65	2
70	4
75	8
80	16
85	32

Risk = 4%
(age)

Family history (Risk doubles for each first degree relative)

- xx Mother
- Father
- Brother
- Sister

- X 1 (no family history)
- X 2 (1 relative)
- X 4 (2 relatives)

Risk = 8% (age +
family history)

Vascular risk factors (Risk doubles for each vascular risk factor)

- Atrial Fibrillation
- Diabetes
- Heart Disease (MI/CAD)
- Hyperlipidemia
- xx Hypertension
- Smoking
- Stroke
- Obesity

- X 1 (no vascular risk factors)
- X 2 (1 vascular risk factor)
- X 4 (2 vascular risk factor2)

Risk = 16% (age +
family history +
vascular risk factors)

Overall risk = 16%

Independent Effects of Midlife Vascular Risk Factors for Risk for Dementia

Risk Factor	Dementia OR (95% CI)
BMI > 30	2.09 (1.16-3.77)
SBP > 140 mmHg	1.97 (1.03-3.77)
Total cholesterol > 251 mg/dL	1.89 (1.02-3.49)
Age, years	1.18 (1.10-1.27)
Women	0.59 (0.34-1.03)
Years of Education	0.86 (0.78-0.96)
Years of Follow-up time	1.00 (0.94-1.06)

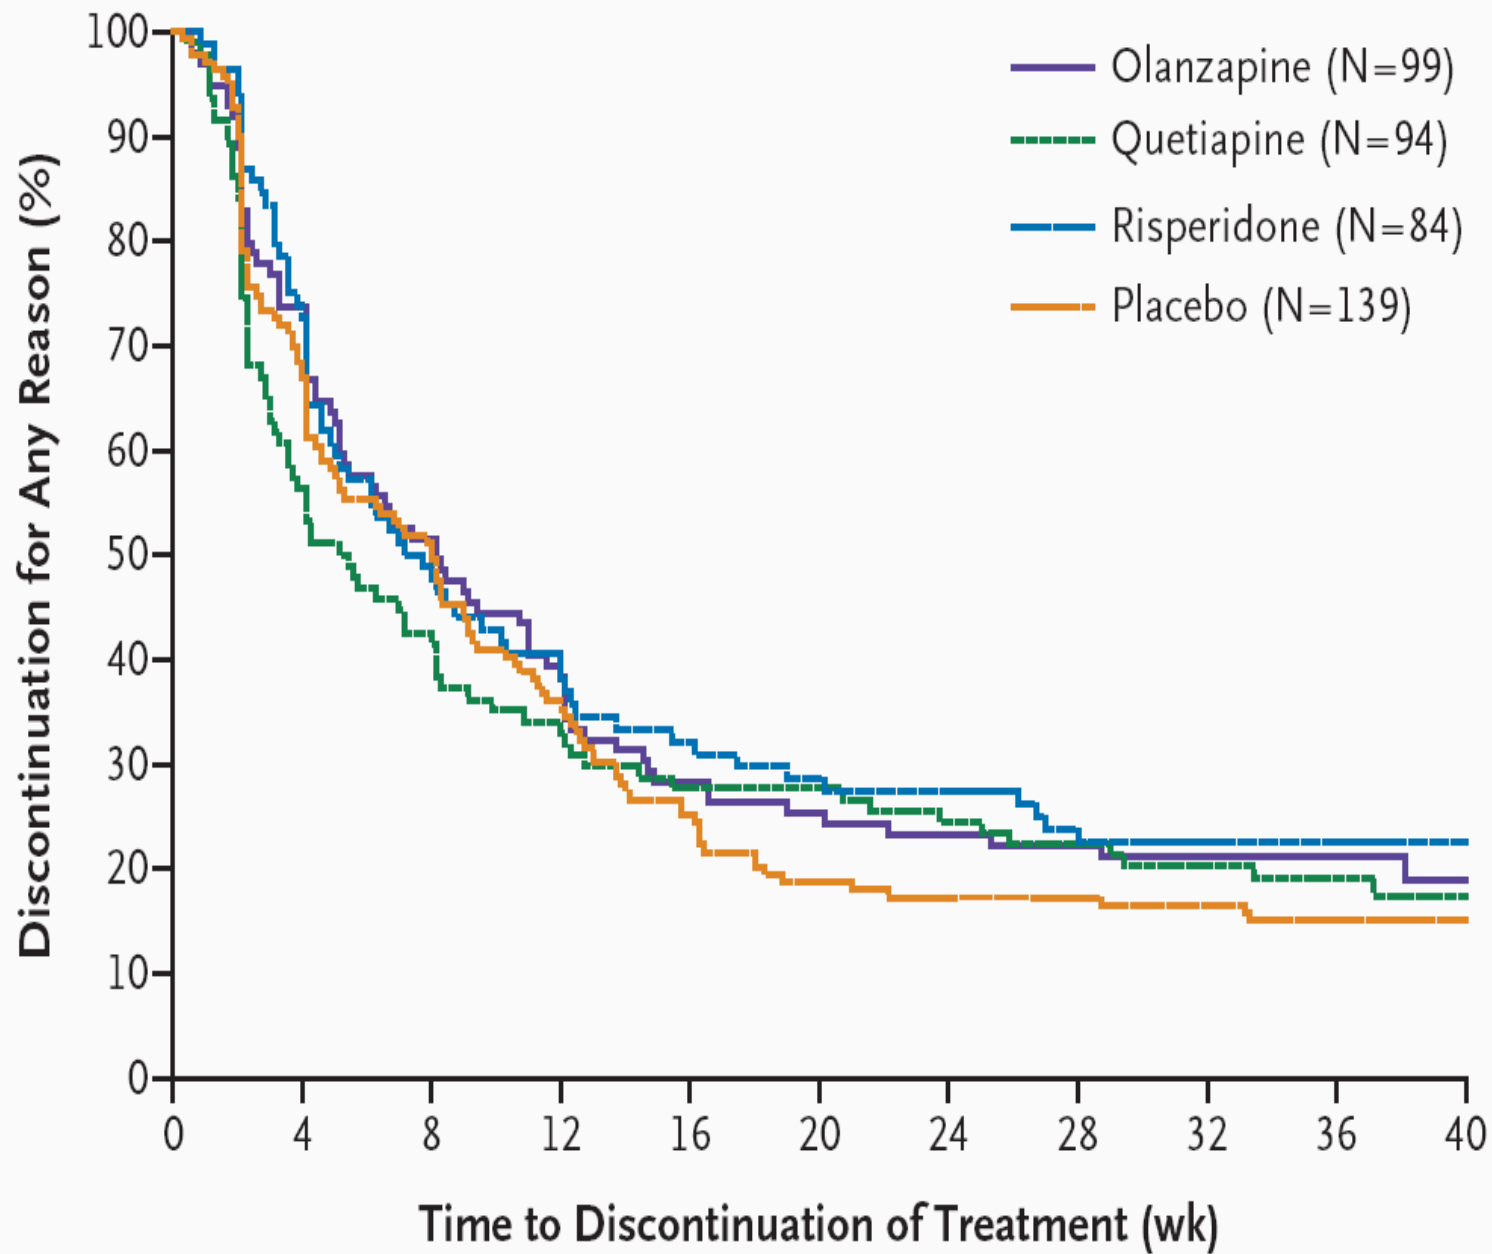

Silent Brain Infarcts (SBI)

- Prevalence of SBI:
 - 60 years of age: 5%
 - 90 years of age: 35%
- Most common risk factors:
 - Age
 - Hypertension
 - History of Coronary Artery Disease

A**B**

Management Issues

- Caregiver stress (psychoeducation)
- Substitute Consent (Power of Attorney, etc)
- Driving
- Behavioral and Psychological issues
- Home care, institutional care
- Pharmacotherapy
- Increased risk of delirium

A

Summary

- Age related illness
- “Rising Tide” of prevalence
- Complex biopsychosocial illness which is common
- Best managed with a team approach
