

**Can you just refill my
zopiclone?**

.....and other bedtime stories

Learning Objectives

1. Recall important aspects of sleep physiology
2. Review the differential diagnosis of insomnia
3. Describe non-pharmacological strategies for treatment of insomnia (CBT-I, sleep hygiene, progressive muscle relaxation)
4. Review evidence for total sleep time and sleep onset latency for select pharmacological treatments of insomnia
5. Highlight useful patient and practitioner resources regarding insomnia management

INSOMNIA

Audience Question:

Which of the following statements is **NOT** included in the diagnosis of chronic insomnia?

- a) Must cause distress or impairment in functioning
- b) Occurs at least 3 nights per week
- c) Lasts for at least 3 months
- d) Is not substance related
- e) Must not be related to a co-morbid condition (depression, chronic pain)

Audience Question: 

List *causes* of disrupted sleep

Risk factors/comorbidities of chronic insomnia

Psychiatric conditions

- depression, anxiety, bipolar disorder, panic, PTSD, schizophrenia

Medical Problems

- pulmonary, rheum, neurologic, cardiovascular, urinary, GI, chronic pain, DM, malignancy

Neurological conditions

- neurodegenerative disorders, FFI, MS, TBI

Medications and Substances

- steroids, diuretics, caffeine, alcohol, nicotine, opioids, cocaine, amphetamines

Other sleep disorders

- RLS, sleep apnea, jet lag

Audience Question: 

I have a TV in my bedroom

TRUE

Or

FALSE?

Behavioural Therapies: Sleep Hygiene

Behavioural Therapies: Stimulus control

Behavioural Therapies: Relaxation

Behavioural Therapy: Sleep restriction

Cognitive Behavioral Therapy

Interpreting Efficacy on Sleep: Definitions from Studies

Sleep latency onset (SLO) - The length of time that it takes to transition from full wakefulness to sleep; normally to the lightest of the non-rapid eye movement (REM) sleep stages

Total sleep time (TST) - The amount of actual sleep time in a sleep episode; equal to total sleep episode less awake time.

Wake after sleep onset (WASO) - Periods of wakefulness occurring after defined sleep onset

Sleep efficiency (SE%) - Refers to the percentage of total time in bed actually spent in sleep

Figure 2. Meta-analysis of the effect of CBT-i on SOL.

Falling asleep

Late follow-up

Wu et al, 2006 (55)

Espie et al, 2007 (44)

Edinger et al, 2009 (42)

Knapp-Hartung pooled estimate

Heterogeneity: $I^2 = 52.2\%$; $P = 0.123$

-39.70 (-74.50 to 4.90)

-15.50 (-31.10 to 0.10)

0.90 (-19.25 to 21.05)

-14.24 (-58.36 to 29.88)

CBT-i = cognitive behavioral therapy for insomnia; SOL = sleep onset latency.

Figure 4. Meta-analysis of the effect of CBT-i on TST.

Staying asleep

Late follow-up

Morin et al, 1999 (50)

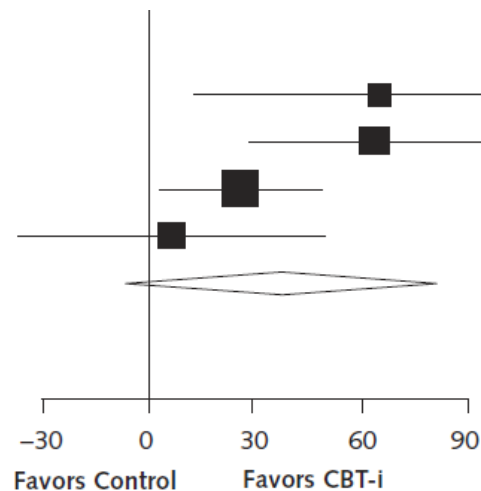

Wu et al, 2006 (55)

Espie et al, 2007 (44)

Edinger et al, 2009 (42)

Knapp-Hartung pooled estimate

Heterogeneity: $I^2 = 51.4\%$; $P = 0.103$

65.11 (12.94 to 117.28)

63.70 (28.42 to 98.98)

25.80 (3.32 to 48.28)

6.50 (-36.21 to 49.21)

38.05 (-5.34 to 81.43)

CBT-i = cognitive behavioral therapy for insomnia; TST = total sleep time.

Waking up in the night

Figure 3. Meta-analysis of the effect of CBT-i on WASO.

Late follow-up

CBT-i = cognitive behavioral therapy for insomnia; WASO = wake after sleep onset.

% time in bed asleep

Figure 5. Meta-analysis of the effect of CBT-i on SE%.

Late follow-up

CBT-i = cognitive behavioral therapy for insomnia; SE% = sleep efficiency.

Audience Question:

Zopiclone increases total sleep time by _____ as compared to placebo.

- a) 5 hours
- b) 30 minutes
- c) 60 minutes
- d) 2 hours

	Sleep Latency Onset (SLO)	Total Sleep Time (TST) ¹	Used for: ²
Zolpidem or Zopiclone	-5 minutes (-10 to -1 mins)	+15 minutes (Max 30 mins)	Sleep-onset ?Maintenance
Benzos (flur/tem/triaz)	-20 minutes (-4 to -11 mins)	+15 minutes (Max 60 mins)	Maintenance Triazolam – sleep onset
Suvorexant	-5 minutes (-10 to -4 mins)	+15 minutes (Max 25 mins)	Sleep onset Maintenance
Doxepin	-5 minutes (-8 to +1 min)	+30 mins (Max 70 mins)	Maintenance
Trazodone	-12 minutes (-22 to -2 mins)	Not reported (mixed results)	Maintenance
Quetiapine*	-40 min (-96 to -22 mins)	+50 minutes? (Max 80 mins but one study lost sleep)	NO NO NO!!!
Melatonin	-5 minutes (-10 to 0 mins)	+5 minutes (Max 25 mins)	Sleep onset
Diphenhydramine	-5 minutes (-10 to 0 mins)	+18 minutes? (Max 40 mins, several no difference)	Sleep onset Maintenance
CBT-I (multi-component)	-5 minutes (-10 to 0 mins)	+8 minutes (max ~20 mins, some no difference)	Sleep onset ?Maintenance

What the heck is this?

Don't see this often....

But look how well it works!

*Very low quality evidence, very small sample sizes
All versus placebo or inactive controls

2. Clin Ther. 2016 Nov;38(11):2340-2372

Suvorexant (Belsomra®)

What the heck is this?

Pharmacology: Orexin receptor antagonist

N = 3076 4 RCTs	1 month	3 months	12 months
Sleep Onset Latency	-9.2 mins	-9.5mins	-4.4 mins (NS)
Total Sleep Time	+20 mins	+19 mins	+16 mins

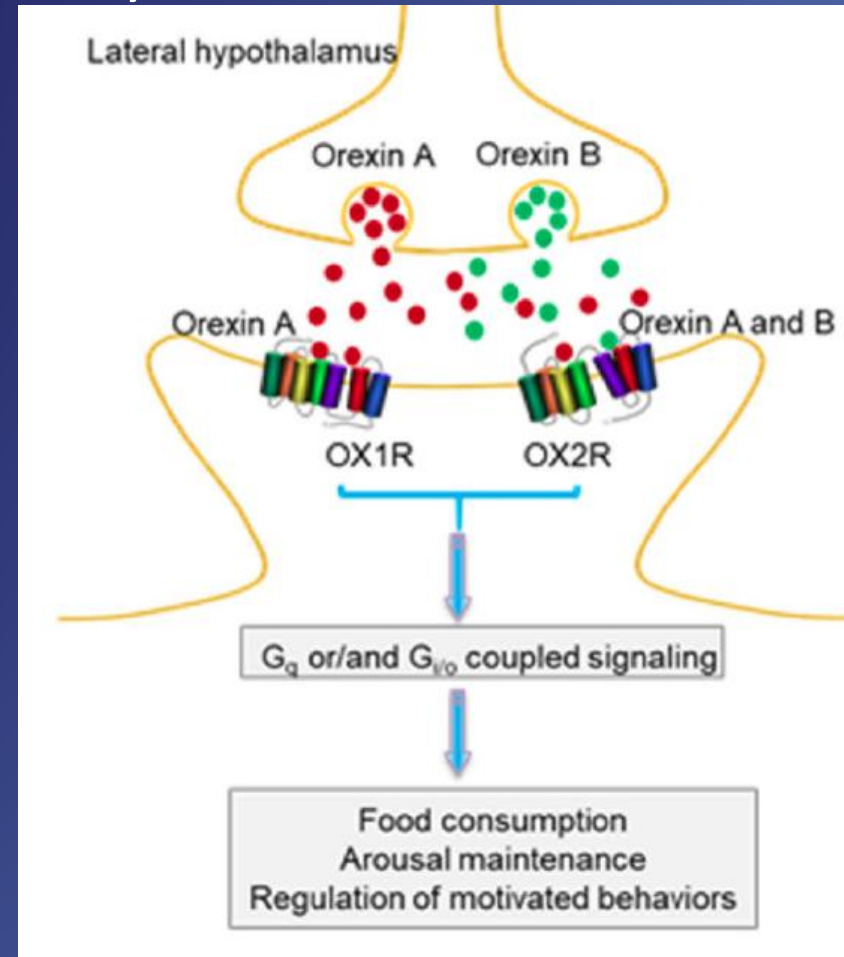

Sleep Medicine Reviews 35 (2017) 1e7

Dose: 5-20mg HS (empty stomach)

Risks: rebound insomnia, cataplexy, risky behaviors while not fully awake

Cost: ?????? On DPD, not in catalogue

Coverage: not covered by Pharmacare

Neurosci Bull. 2019 Nov 28. doi: 10.1007/s12264-019-00447-9

QUETIAPINE 🙌 is 🙌 NOT 🙌 A 🙌 SLEEP 🙌 AID 🙌

Why it could work for sleep: H1 blockade, antimuscarinic, alpha-1 blockade and 5-HT2A antagonism (all produce sedation)

Risks:

- Side effects begin even at LOWEST dose
 - Anticholinergic, orthostatic hypotension, EPS, metabolic adverse effects (lipids, weight, BG)

- Very few patients have been studied (~40) without comorbid psychiatric disorders
- Studies lack objective testing (polysomnography)

You won't let me use Z-drugs, benzos, or Seroquel[®] -now what?

Trazodone (Off-label use) \$0.23/tab for 50mg (Part 1 Pharmacare benefit)

- Dose 25-50mg HS (alpha blocker, histamine blocker) – SARI higher doses
- Useful: Aggressive behaviour/agitation in Dementia and sundowning [Curr Treat Options Neurol. 2019 Jun 24;21(7):30]
- **Risks:** hypotension, GI symptoms, longer half-life in elderly

Doxepin (Silenor[®]) \$0.66/tab 3mg, \$1.33/tab 6mg (not covered),
(Sinequan[®]) 10-50mg \$0.37-\$0.86/capsule (Part 1 Pharmacare)

- 3mg-6mg HS (histamine blocker)
 - 3mg TST +12 mins, WASO 10 mins, 6mg TST 17mins, WASO 14 mins¹
- Separate at least 3 hours from meals (delayed absorption), 30mins prior to bedtime
- **Risks:** anticholinergic (mild), headache, increased BP

You won't let me use Z-drugs, benzos, or Seroquel[®] - now what?

Melatonin Age-Related Insomnia

- DOSE IS 0.3mg-1mg (*physiologic*)
- **Hormone:** wearing off (eventually), rebound insomnia and concerns regarding puberty in children¹

Ramelteon (Rozerem[®]) not in Canada ☹️

- Melatonin receptor agonist (M1+M2) higher affinity than melatonin

Exploit sedative effects of other medications (comorbid disorders)

- **Depression** – TCAs, paroxetine, mirtazapine, trazodone
- **Neuropathic pain/FM** – TCAs, gabapentin, pregabalin

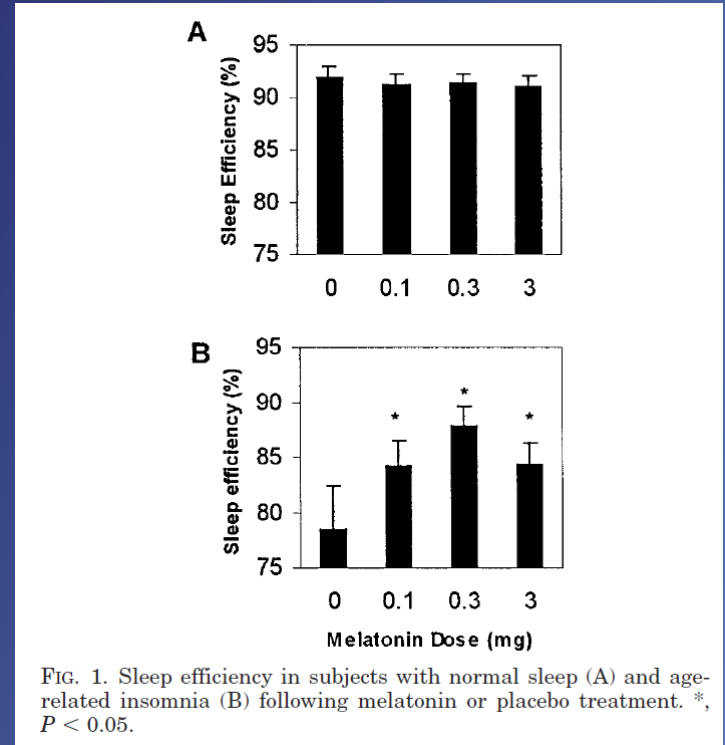

FIG. 1. Sleep efficiency in subjects with normal sleep (A) and age-related insomnia (B) following melatonin or placebo treatment. *, $P < 0.05$.

[J Clin Endocrinol Metab. 2001 Oct;86(10):4727-30]

Audience Question: 

*Name a drug that disrupts
sleep*

Drugs that disrupt sleep

Steroids

Antidepressants

Bronchodilators

Diuretics

Stimulants

Alcohol

Nicotine

Thyroid

Dopamine
analogs/agonists

Providers

Management of Chronic Insomnia

This clinical tool guides primary care providers to assess and manage chronic insomnia and pharmacological options in the general adult population. An estimated 3.3 million Canadians aged 15 years or older (about one in every seven Canadians) have difficulty going to sleep or staying asleep.¹ This can impact both daily functioning and quality of life. Appropriate management options, such as cognitive behaviour therapy for insomnia (CBT-I) and pharmacotherapy regimens, are discussed in the tool to support primary care providers in their approach.^{2,3,4} Considerations and instructions for initiating a benzodiazepine taper are also addressed within the tool.

If you are a Manitoba resident experiencing difficulty with sleep, and would like to access the services of Dr. Vincent, please have your physician fax a referral to (204) 787-3755. Dr. Vincent provides individual consultation, an online program, as well as individual and group treatment. We have a number of ongoing research projects including the impact of improving sleep on diabetes and the effectiveness of online versus telehealth delivered care for insomnia. If you wish to find out more about the research projects in Dr. Vincent's laboratory, please contact Ms. Alanna Singer, research coordinator, at return2sleep@gmail.com. Dr. Vincent also operates a private practice and provides individual psychotherapy and couple counselling for relationship problems, anxiety and mood difficulties, tinnitus, and stress. Contact her directly at (204) 787-3272 for these services.
