

C.D. 1971

C.D. was admitted to hospital with shortness of breath and anxiety. 6 months ago was diagnosed with ALS. States now feels safe and calmer during our conversation.

When asked the PDQ question C.D. expressed that she would like the staff to know how important her family are to her and she feels extremely worried about how the decline in her health related to ALS will affect her family. She is raising her 8 yr old grand daughter. She does have a blended family, however they are grown and have moved away. She also feels overwhelmed in dealing with her diagnosis herself..becoming the disease and forgetting the person.

C.D stated that she enjoys her 3 dogs and yoga as well. Had been in the military where she trained as a social worker. C.D had only been hospitalized when young so feels anxious in her new surroundings and the unknown.
