Learning Objectives

- Understand evolving definitions of palliative care
- Integrate the serious illness conversation guide into routine clinical practice to efficiently gather essential information to help you support your patients as they navigate complex medical decisions
- Understand the role of regional palliative care programs and indications for referral and/or enrolment
- Assess and manage common symptoms in patients with advanced illness
- Develop an approach to prevent, screen for, and manage delirium in palliative care patients

This session will be online only

Paid registration also provides access to the recording and resources post event.

All recordings will be available until August 31, 2024.
