

SKILLS WORKSHOPS

Thompson Community Based Program 2021 - 2022

Immunotherapy and Its Complications

Facilitators: Dr. Mark Kristjanson MD, CCFP (CancerCare MB)

Dr. Veena Agrawal MD, FRCPC (endocrinologist CancerCare MB)

Date: March 18, 2022

Time: 1300-1500

Location: Online via ZOOM

Objectives

At the conclusion of this learning event, participants should be able to:

- Recognize the constellation of signs and symptoms for which immune- related Adverse Events (irAEs) should be considered in the differential diagnosis. (Family Medicine Expert, Scholar)
- Describe those circumstances in which the primary care clinician should initiate urgent communication with the medical oncologist of a patient who is being or has been treated with an immune checkpoint inhibitor. (Collaborator, Family Medicine Expert)
- Explain the work up of suspected irAEs of the endocrine system, skin, GI tract, lung and liver. (Family Medicine Expert)
- Describe the role of steroids and other immune suppressant drugs in the management of irAEs. (Family Medicine Expert, Scholar)
- State the sequence of resuscitation of a patient who presents with an Addisonian crisis. (Scholar, Family Medicine Expert)
- Describe the technique and explain the role of the ACTH stimulation test in the work up of steroid-deficient patients. (Communicator, Family Medicine Expert)
